

Summary

- 4.5+ years of experience as a Full-Stack Software Engineer specialising in JavaScript-based web applications.
- Architected a frontend framework for a responsive web and created RESTful APIs by using a backend framework like ExpressJS.
- Experience building real-time GPS tracking and fleet management systems.
- Integrated third-party services, including Google Static Maps API.
- Designed and developed RESTful APIs and API-centric infrastructures for SaaS applications.
- Contributed to Large Language Model (LLM) training and evaluation projects.
- Generated and curated high-quality structured and unstructured datasets to improve AI model accuracy and reasoning.
- Strong analytical, debugging, and problem-solving skills.

Skills

- JavaScript
- ReactJS
- HTML, CSS and Tailwind CSS
- PostgreSQL
- MongoDB
- ExpressJS
- NodeJS
- NextJS
- Material-UI, Prime-React, Styled-components, Sementic UI

Experience

Turing

December 2025 to Current

LLM Trainer

U.S (Freelancing)

- Contributed to large-scale **Large Language Model (LLM)** training and evaluation initiatives by generating high-quality structured and unstructured datasets.
- Produced and curated training data to improve model accuracy, reasoning capability, and response relevance.
- Performed detailed data annotation and labelling across diverse domains to support supervised and reinforcement learning workflows.
- Developed and validated code snippets and technical solutions to support AI training and evaluation tasks.
- Followed structured workflows and project-specific SOPs to meet defined accuracy and turnaround benchmarks.

TatvaSoft

July 2022 to September 2025

Senior Software Engineer

Ahmedabad, India

- Developed scalable and maintainable code, ensuring long-term stability of the software.
- Integrated new technologies into existing systems, increasing capabilities and improving overall performance.
- Developed reusable components that significantly reduced development effort on multiple projects.
- Implemented effective debugging strategies, resulting in fewer software defects and increased reliability.
- Enhanced user experience with intuitive interface design and responsive web applications.
- Analyzed proposed technical solutions based on customer requirements.
- Improved software performance by identifying and resolving bottlenecks in the code.
- Delivered unit-tested systems within customer-prescribed timeframes.
- Coordinated with other engineers to evaluate and improve software and hardware interfaces.
- Developed robust, scalable, modular and API-centric infrastructures.
- Optimized algorithms for faster processing, reducing overall computation time.

Software Engineer

- Consistently met project deadlines by effectively managing time and prioritizing tasks according to importance.
- Established efficient communication channels within the team, leading to better collaboration among members during project development phases.
- Tested methodology with writing and execution of test plans, debugging and testing scripts and tools.
- Collaborated with management, internal and development partners regarding software application design status and project progress.

Projects**Fleet management solution**

- Role: Front-end developer
- responsibilities: Requirement analysis and system architecture, project planning, development of UIs, and unit testing
- Project description: It is a technology-focused, data-driven startup providing end-to-end connected mobility solutions to fleet owners and businesses to gain better control of their vehicles and assets. Its intelligent fleet management and GPS tracking software helps companies operate day-to-day tasks in a modern, reliable, and easy way instead of drowning themselves in spreadsheets and inflexible software
- Technology: ReactJS, Redux, GIT, Google Maps API

Interview Management System

- Role: Full Stack Developer
- Responsibilities: requirement analysis and system architecture, project planning, and development of UIs
- Project Descripon : This plaorm facilitates the management of interviews with mulple rounds in an easy manner. It consists of three portals:
- Admin Portal: This portal is for administrators. They use it to manage HRs and Interviewers
- HR portal: This portal is for all HR professionals Using this portal, they can manage interviews and candidates, and HRs can schedule interviews with interviewers who are available at specific times
- Interviewer portal: Interviewers use this portal to conduct interviews. Based on their availability, they can accept or reject scheduled interview invitations. If available, they accept invitations and conduct interviews with candidates at specific times
- Technology : ReactJS, NodeJS, NestJS, ExpressJS, Postgres, Redux -Saga, Mui, PrimeReact

Investor Platform

- Role: Front-end Developer
- Responsibilities: requirement analysis and system architecture, project planning, and development of UIs
- Project Description: Investor Platform provides a platform in which users (who have business ideas and are looking for investors who can understand their starter ideas and invest in their business) share their ideas and can get investment in their business from investors Also, Investors (who are having good wealth and want to invest in good businesses) can get good businesses to invest their wealth.
- Technology: ReactJS, Tailwind CSS, HTML, CSS, Bitbucket, Red

Education**Gandhinagar Institute of Technology**

June 2019

Bachelor of Engineering: Information Technology

Gandhinagar
